Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC VEGED (vascular endothelial growth factor). The invention relates to a CC VEGED (vascular endothelial growth factor). The invention relates to a CC method of producing a monomeric monocyclic peptide by a measuring CC a peptide loop fragment from an exposed loop of a growth factor protein CC monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked CC monocyclic peptides) and a cyclic peptide with at least one amino acid CC monocyclic peptides) and a cyclic peptide with at least one amino acid CC menocyclic peptides with at least one amino acid CC necessive by anglogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition CC characterised by anglogenesis, neovascularisation or lymphangiogenesis. CC crebrovascular accident, post-anglopathy, psoriasis, arthropathy.

CC cerebrovascular accident, post-anglopasty restenosis, head, heat or cold normone-related anglogenic dysfunction, diabetes induced neovascular cold cc sequelae, hypertension induced neovascular sequelae, or chronic liver in amammal (the mammal has a condition characterised by fluid or brain. The peptides are also used to independent characterised by fluid or brain. The monomeric and bicyclic peptides are used to interfere are used to interfere and cological activity induced by VEGF-C or -D and chronic inflammation. Assertially rhoused by VEGF-C or -D and chronic inflammation. Assertially rhoused by VEGF-C or -D and chronic inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                               Disulfide-bond
                                                                                                                                                                                                                                                                                 neovascularisation: lymphangiogenesis; psoriasis; tumour;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Characterised by anglogenesis, neovascularisation or lymphangiogenesis.

Characterised by anglogenesis, neovascular temour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold formone-related anglogenic dysfunction, diabetes induced neovascular cold confection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid cacumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, cor brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere curit at least one biological activity induced by VEGF, VEGF-C or -D and characterised in combination with an anti-inflammatory agent, to treat a continuous process of the combination with an anti-inflammatory agent, to treat a continuous continuous combination with an anti-inflammatory agent, to treat a continuous continuou
                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                      AAU04534 standard; Peptide; 13 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     VEGFD (vascular endothelial growth factor). The invention relates to a beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by axidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with anglogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by ancionancia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     chronic inflammation, especially

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restanosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive bormono-related angiogenic discharge disabetes induced necessive bormono-related angiogenic discharge disabetes induced necessive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WO200152875-A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic
                                                                                                                                                                                                                                                          hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere vasculature. The monomeric and bicyclic peptides are used to interfere vasculature. The monomeric and bicyclic peptides are used to interfere vasculature. The monomeric and bicyclic peptides are used to interfere are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and disports.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            18-JAN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disulfide-bond
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; VEGF; vascular endothelial growth factor; angiogenesis;
                characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benique tumour, post-recovery hemangioma, vascularised malignant or benique tumour, head, heat or col cerebrovascular accident, post-angioplasty restenosis, head, heat or col trauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by vEGF. VEGF-C or -D and with at least one biological activity induced by vEGF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO200152875-A1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disulfide-bond
                                                                                                                                                                                                                                                                                                        VEGED (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, deleted prior to cyclisation are used to interfere with angiogenesis deleted prior to cyclisation are used to interfere with angiogenesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a loop fragment from an exposed loop of a growth factor protein b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2001-442248/47.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local
whose 3-dimensional structure is modelled on the expose loop of human vEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked deleted prior to cyclisation are used to interfere with anglogenesis, necovascularisation or lymphangiogenesis in a mammal with a condition
                                                                                                                                                                                                                          Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by
                                                                                                                                    The sequence represents a dimeric bicyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of huma

```

The sequence represents a monomeric monocyclic peptide of the invention,

Example 25; Page 47; 102pp; English.

the cysteine residues

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphanglogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring the period of producing a monomeric monocyclic peptide by a measuring peta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis deleted prior to cyclisation are used to interfere with an condition neovascularisation or lymphanglogenesis in a mammal with a condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           whose 3-dimensional structure is modelled on the expose loop of human

WPI; 2001-442248/47.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues -

Example 25; Page 47; 102pp; English.

commoncyclic peptides, dimeric bicyclic peptides (comprising 2 linked commoncyclic peptides) and a cyclic peptide with at least one amino acid commoncyclic peptides) and a cyclic peptide with at least one amino acid commoncyclic peptides) and a cyclic peptide with at least one amino acid composed prior to cyclisation are used to interfere with anglogenesis, composed prior to cyclisation are used to interfere with anglogenesis, composed prior to cyclisation or lymphangiogenesis in a mammal with a condition composed prior to compose the condition or lymphangiogenesis. Composed prior to benign tumour, post-recovery composed prior vascular accident, post-angioplasty restenosis, head, heat or cold crembrovascular accident, post-angioplasty restenosis, head, heat or cold crembrovascular accident, post-angioplasty restenosis, head, heat or cold crembrovascular dysfunction, diabetes induced neovascular sequelae, or chronic liver composed prior c a peptide loop and cyclising The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring better the contraction of producing a monomeric monocyclic peptide by a measuring beta-beta chronic inflammation, especially rheumatoid arthritis, psoriasis and diabetic retinopathy. a-beta carbon separation distances on opposite antiparallel strands eptide loop fragment from an exposed loop of a growth factor protein cyclising the peptide by oxidising the cysteine residues.                                                                                                                  CC WEGFD (vascular endothelial growth factor). The invention relates to a CC VEGFD (vascular endothelial growth factor). The invention relates to a CC method of producing a monomeric monocyclic peptide by a measuring CC extended to producing a monomeric monocyclic peptide by a measuring CC a peptide loop fragment from an exposed loop of a growth factor protein CC and cyclising the peptide by oxidising the cysteine residues. The CC monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked CC monocyclic peptides) and a cyclic peptide with at least one amino acid CC monocyclic peptides) and a cyclic peptide with at least one amino acid CC clear prior to cyclisation are used to interfere with angiogenesis, CC characterised by angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition CC characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, CC cerebrovascular accident, post-angioplasty restenosis, head, heat or cold ctrauma, substance-induced moovascularisation of the liver, excessive hormone-related annionation dvsfinnction. diabetes induced moovascularisation of the liver, excessive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     neovascularisation; lymphangiogenesis; psoriasis; tumour; diabetes induced neovascular sequelae; rheumatoid arthritis; diabetic retinopathy; chronic inflammation; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          26-SEP-2001 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; VEGF; vascular endothelial growth factor; anglogenesis; neovascularisation; lymphangiogenesis; psoriasis; tumour; diabetes induced neovascular sequelae; rheumatoid arthritis;
         The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition neovascularisation or lymphangiogenesis in a mammal with a condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diabetic retinopathy; chronic inflammation; cyclic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The condition is diabetic retinopathy, psoriasis, arthropathy, chemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive concerns the properties of the constant of the liver, excessive concerns the populate anglogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver conficulation, the peptides are also used to modulate vascular permeability concumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, cor brain. The peptides are used to image blood vessels and lymphatic cor brain. The peptides are used to image blood vessels and lymphatic constitute. The monomeric and bicyclic peptides are used to interfere cuth at least one biological activity induced by VEGF, VEGF-C or -D and chronic inflammation, especially rheumatoid arthritis, psoriasis and
Novel monomeric monocyclic peptide, used to interfere with angiagenesis, or lymphangiogenesis, is produced by cyclising a loop fragment from an exposed loop of a growth factor protein b oxidizing the cysteine residues -

The invention relates to a CC method of producing a monomeric monocyclic peptide by a measuring CC apptide loop fragment from an exposed loop of a growth factor protein monocyclic peptides, dimeric bicyclic peptides (comprising the peptides, dimeric bicyclic peptides (comprising 2 linked CC monocyclic peptides) and a cyclic peptide with at least one amino acid neovascularisation or lymphangiogenesis in a mammal with a condition or lymphangiogenesis in a mammal with a condition CC characterised by angiogenesis, neovascularisation or lymphangiogenesis, arthropathy, cc cerebrovascularised malignant or benign tumour, post-recovery ctrauma, substance-induced neovascularisation or lymphangiogenesis. CC cerebrovascular accident, post-angioplasty restenosis, head, heat or cold hormone-related angiogenic dysfunction, diabetes induced neovascularise induced neovascular sequelae, or chronic liver in a mammal (the mammal has a condition characterised by fluid cor brain. The peptides are used to modulate vascular permeability accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, vasculature. The monomeric and bicyclic peptides are used to interfere care also used in combination with an anti-inflammatory agent, to treat a diabetic retinopathy, especially rheumatoid arthritis, psoriasis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                anglogenesis, neovascularisation or lymphangiogenesis. The condition is cdiabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised cmalignant or benign tumour, post-recovery cerebrovascular accident, cc malignant or benign tumour, post-recovery cerebrovascular accident, cc post-angloplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic cdysfunction, diabetes induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a cc condition characterised by fluid accumulation in peripheral limbs or in clings, peritoneal cavity, pleura, or brain. The peptides are used to interfere with at least one biological activity conducted by VEGF, VEGF, or D and are also used in combination with an canti-inflammatory agent, to treat a chronic inflammation, especially conducted arthritis, psoriasis and diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequence represents Human VEGF-D (vascular endothelial growth factor) amino acids VallO1-Thr 173, used together with the C-terminal 23 residues of VEGF to make a hybrid theoretical molecule for 3 dimensional modelling. The sequence is used in a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAU04520 standard; protein; 96
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 1; Page 90-91; 102pp; English.

The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF. Cor -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and diabetic retinopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                used to interfere with angiogenesis, neovascularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic neovascularisation of the liver, excessive hormone-related angiogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  amino acids vall01-PRO186. The sequence is used in a method of producing a monomeric monocyclic peptide by a measuring beta-beta carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclising a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence represents Human VEGF-D (vascular endothelial growth factor)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 1; Page 89; 102pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2001-442248/47.

                                                                                                                                                                                                                          CC The present sequence represents human vascular endothelial growth CC factor (VEGF)-D. The specification describes a human cell line CC which stably expresses VEGF-D, or fragments/analogues having VEGF-D CC biological activity. VEGF-D antagonists, e.g. antisense nucleic acids CC or triplex DNA, VEGF-D variants or antibodies (especially chimeric CC antibodies), are useful for the treatment or alleviation of malignant CC enlanomas, tumours or psoriasis. Anglogenesis and lymphanglogenesis stimulating amounts of VEGF-D can be administered to enhance the CC acceptance and/or healing of skin grafts or to stimulate the healing CC stimulating amounts of VEGF-D can be used to treat lymphedema. CC Endothelial proliferation stimulating amounts of VEGF-D can be used to treat scleroderma. Vascularisation stimulating amounts of VEGF-D can CC useful for detecting tumours expressing VEGF-D. Fully processed VEGF-D can be used to stimulate at least one VEGF-D. Fully processed VEGF-D can be used to stimulate at least one VEGF-D bloactivity chosen from CC endothelial cell proliferation, migration, survival and differentiation can defend the substitution without inducing vascular permeability.

# SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
